Economically priced complete seal kits are available to help minimize inventory.

Seal Kits
The enclosed impeller ensures the highest efficiency, and is hydraulically balanced which reduces axial thrust, and increases bearing life. The impeller is keyed and locked to the shaft.

316ss Wet End Option
316ss wet ends are available for corrosive application. All wetted surfaces are constructed of 316ss including: Casing, Impeller, Adaptor, Sleeve, Washer, Impeller Screw and Key.

Impeller
The enclosed impeller ensures the highest efficiency, and is hydraulically balanced which reduces axial thrust, and increases bearing life. The impeller is keyed and locked to the shaft.

Bronze wear rings are easily replaced and prevent casing wear. Rings are not required on 316ss wet ends.

Bearings
Frame mounted pumps have regreaseable SKF single row deep groove ball bearings with a minimum B-10 life of 20,000 hours.

Casing Designed For Easy Maintenance
Back pull out design allows maintenance of bearing frame without disturbing the suction and discharge piping. Multiple casing discharge positions are possible.

Interchangeable Parts
Component parts of similar sizes are interchangeable with the Frame Mounted and Close Coupled Pumps. This means less spare parts inventory and fast delivery of required parts.

Frame Mounted Pump - Model FM
Frame mounted pumps are constructed with a rigid bearing frame, flexibly coupled and mounted on a fabricated steel base with optional drip pan. The casing, adapters, and bearing frames share mating registers for maximum interchangeability. Coupling guards meet ASME B 15.1 specifications.

Frame Mounted Pumps are horizontal, end suction, centrifugal pumps designed for general service such as clean water, solvents, light oils, non-corrosive chemicals, coolants and brines. Available in capacities to 2300 GPM heads to 440 feet, these pumps are an economical and dependable solution for your pumping needs. All flanges are 125lb ANSI B16.1 rating; NPT connections are standard on 6” and most 8” sizes. A renewable bronze shaft sleeve is standard on cast iron pumps and a 316ss shaft sleeve is standard on alloy pumps.

Mechanical Seals
Type 1 seal is standard; constructed of Carbon vs. Silicon Carbide faces, FKM elastomers and stainless steel metal parts. The maximum operating temperature rating is 150°F with a standard seal in water. Optional seal materials are available for higher temperatures.
